June 29, 1983

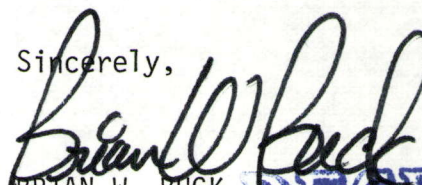

Mr. Tom Tetting
Division of Oil, Gas and Mining
4241 State Office Building
Salt Lake City, Utah 84114

Dear Mr. Tetting:

This letter answers questions raised at our meeting on June 22, 1983 at which we discussed the findings of your June 21, 1983 field inspection of the Mercur Mine and reviewed the sufficiency of Getty's response to Mr. Jim Smith's October 7, 1982 letter which listed various conditions for final approval.

- 1) In regards to your field inspection findings, we will sign all topsoil stockpiles and scarify same before reseeded. We will also attempt to remove vegetation from new topsoil stockpile locations prior to depositing topsoil.
- 2) Your review of your files showed that Getty had satisfied all conditions of Mr. Smith's October 7, 1982 letter (attached).
- 3) We will submit the requested 1"=200' scale yearly updated map beginning in December 1983. In lieu of using MR Form 3, we will attach current versions of the 12-14-82 Mercur Mine Topsoil Inventory chart which was attached originally to Mr. Hautala's December 16, 1982 letter (attached).
- 4) Attached for your records is a copy of the Utah Department of Health approval for use of the Apex Shaft as a Class V injection well.

Sincerely,

BRIAN W. BUCK
Environmental Coordinator
